Analisis de Incidentes de IA - AIID

Total incidents analyzed: 122

Period covered: 2014-2023

Regions included: Asia, Europe, North America

Methodology

Data source: AI Incident Database (AIID).
Temporal scope: 2014-2023.
Regions: North America, Europe, Asia.

Preprocessing: multi-label parsing, temporal and geographic filtering, harm-type recategorization, and multi-label binarization.

NLP: Unicode normalization, tokenization, WordNet lemmatization, stopword removal and a configurable normalization map.

Sentiment analysis backend: transformer. Negativity scores are mapped to categorical labels using thresholds high=0.7 (Alta), medium=0.4 (Media), otherwise Baja.
